Technologies

**iSCSI 10Gb Broadcom HBA vs. 10Gb
Intel Software Initiator with I/OAT
enabled**

Key findings

In large block tests...

- The 10Gb Broadcom host bus adapter (HBA) maintained CPU usage **below 2 percent**.
- The 10Gb Intel Software Initiator with I/O Acceleration Technology (I/OAT) enabled maintained CPU usage **above 14 percent**.
- Both configurations produced comparable throughput results.

In small block tests...

- The 10Gb Broadcom HBA maintained CPU usage **below 9 percent** on all 10 access specifications.
- The 10Gb Intel Software Initiator with I/OAT enabled maintained CPU usage between **10 and 25 percent**.
- Both configurations produced comparable throughput results.

When using 10Gb Ethernet

- Due to their low level of CPU utilization, in our tests HBA iSCSI initiators proved to be a **good choice** for use with 10Gb Ethernet.
- Due to their high level of CPU utilization, in our tests software iSCSI initiators proved **not to be a good choice** for use with 10Gb Ethernet.

iSCSI 10Gb Broadcom HBA vs. 10Gb Intel Software Initiator with I/OAT enabled

In large block tests, the 10Gb Broadcom HBA and the 10Gb Intel Software Initiator with I/OAT enabled delivered comparable throughput.

iSCSI 10Gb Broadcom HBA vs. 10Gb Intel Software Initiator with I/OAT enabled

Large block tests: Percentage CPU utilization

In large block tests, the 10Gb Broadcom HBA dramatically reduced CPU utilization.

iSCSI 10Gb Broadcom HBA vs. 10Gb Intel Software Initiator with I/OAT enabled

Large block tests: Detailed results

| MB per second (higher is better) | | |
|-----------------------------------|-------------------|--------------------------------------------------|
| lometer test | 10Gb Broadcom HBA | 10Gb Intel Software Initiator with I/OAT enabled |
| Video on Demand 512K | 710.65 | 739.35 |
| DSS 1M | 809.35 | 871.82 |
| CPU utilization (lower is better) | | |
| lometer test | 10Gb Broadcom HBA | 10Gb Intel Software Initiator with I/OAT enabled |
| Video on Demand 512K | 1.52% | 14.51% |
| DSS 1M | 1.56% | 17.68% |

Test results represent the median score of three test runs.

iSCSI 10Gb Broadcom HBA vs. 10Gb Intel Software Initiator with I/OAT enabled

In small block tests, the 10Gb Broadcom HBA and the 10Gb Intel Software Initiator with I/OAT enabled delivered comparable throughput.

iSCSI 10Gb Broadcom HBA vs. 10Gb Intel Software Initiator with I/OAT enabled

In small block tests, the 10Gb Broadcom HBA dramatically reduced CPU utilization.

iSCSI 10Gb Broadcom HBA vs. 10Gb Intel Software Initiator with I/OAT enabled

Small block tests: Detailed results

| 10Gb Broadcom HBA IOPS | 10Gb Intel Software Initiator with I/OAT Enabled IOPS | Custom Iometer tests | 10Gb Broadcom HBA IOPS | 10Gb Intel Software Initiator with I/OAT Enabled IOPS |
|------------------------------|----------------------------------------------------------------------|----------------------------|-------------------------------|----------------------------------------------------------------------|
| Total IOPS | | Small block | Percentage CPU utilization | |
| 23,579.47 | 23,222.59 | Web file server 4K | 6.09% | 14.01% |
| 17,492.03 | 17,466.39 | Web file server 8K | 5.18% | 13.09% |
| 8,849.25 | 9,245.78 | Web file server 64K | 3.79% | 13.92% |
| 12,668.42 | 16,919.43 | Media streaming 64K | 5.07% | 25.25% |
| 12,112.43 | 12,672.80 | SQL Server log 64K | 4.40% | 11.18% |
| 12,501.17 | 17,419.78 | OS paging 64K | 4.96% | 23.06% |
| 32,907.58 | 35,662.69 | Web server log 8K | 8.88% | 23.02% |
| 16,125.20 | 16,182.18 | DB_OLTP 8K | 4.95% | 10.86% |
| 18,770.52 | 18,587.52 | Exchange email 4K | 5.05% | 12.50% |
| 16,202.75 | 16,236.98 | OS drive 8K | 4.84% | 12.06% |
| 17,120.88 | 18,361.61 | Small block average | 5.32% | 15.90% |

Test results represent the median score of three test runs.

iSCSI 10Gb Broadcom HBA vs. 10Gb Intel Software Initiator with I/OAT enabled

Detailed settings for each access specification we used in our tests

| Test pattern | Payload size (KB) | Percentage read | Percentage write | Percentage random | Percentage sequential |
|---------------------|-------------------|-----------------|------------------|-------------------|-----------------------|
| Web file server 4K | 4 | 95 | 5 | 75 | 25 |
| Web file server 8K | 8 | 95 | 5 | 75 | 25 |
| Web file server 64K | 64 | 95 | 5 | 75 | 25 |
| DSS | 1,024 | 100 | 0 | 100 | 0 |
| Media streaming | 64 | 98 | 2 | 0 | 100 |
| SQL Server log | 64 | 0 | 100 | 0 | 100 |
| OS paging | 64 | 90 | 10 | 0 | 100 |
| Web server log | 8 | 0 | 100 | 0 | 100 |
| DB-OLTP | 8 | 70 | 30 | 100 | 0 |
| Exchange email | 4 | 67 | 33 | 100 | 0 |
| OS drive | 8 | 70 | 30 | 100 | 0 |
| Video on Demand | 512 | 100 | 0 | 100 | 0 |

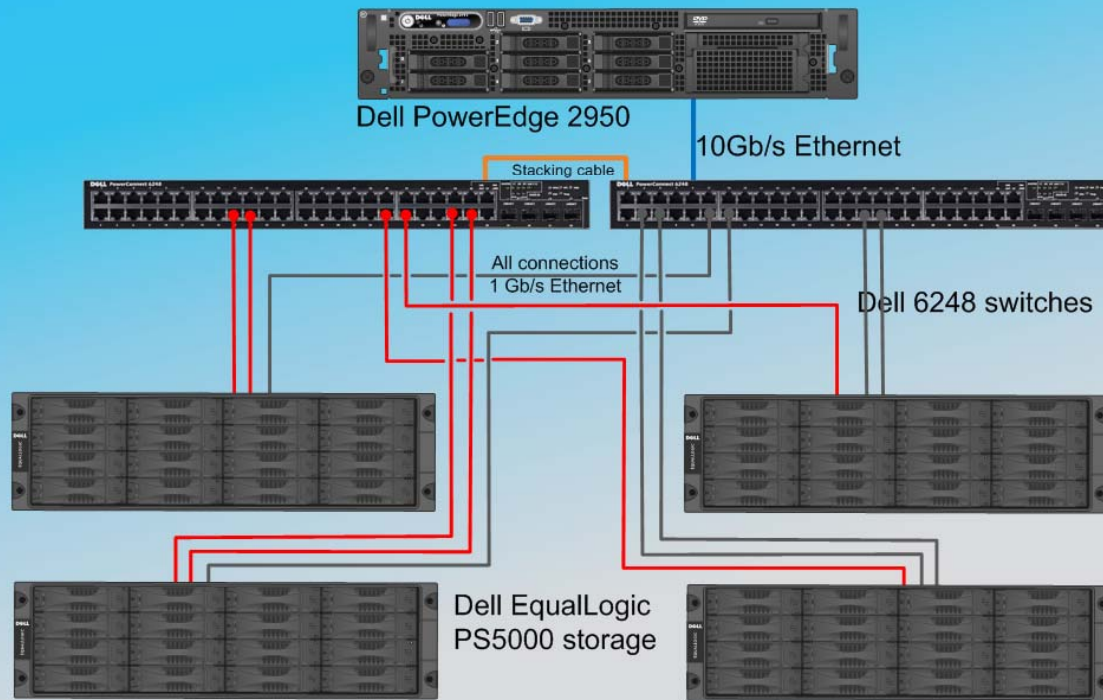

iSCSI 10Gb Broadcom HBA vs. 10Gb Intel Software Initiator with I/OAT enabled

Test system configuration information

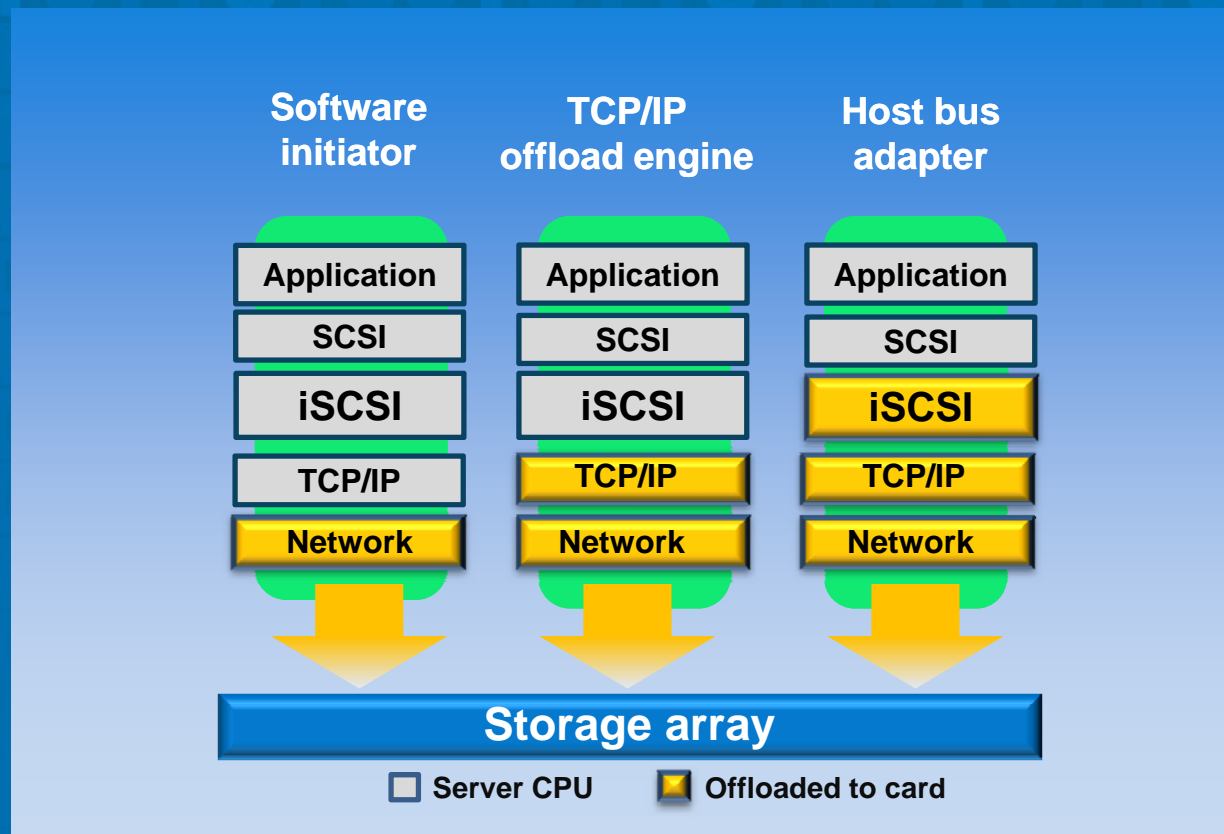

| Server | Dell PowerEdge 2950 |
|------------------|-------------------------------------------------------------------------------|
| Processors | Dual Quad-Core Intel Xeon E5405 2.0 GHz |
| RAM | 16GB PC2-5300 DDR2 RAM (8 x 2 GB) |
| Operating system | Windows Server 2008 Enterprise x64 Service Pack 1 |
| Storage arrays | Four Dell EqualLogic PS5000XV iSCSI arrays |
| Total drives | 32 SAS drives, 146 GB, 15K RPM |
| Network cards | Broadcom BCM57710 NetXtreme II 10 GigE and Intel 10 Gigabit AT Server Adapter |

iSCSI 10Gb Broadcom HBA vs. 10Gb Intel Software Initiator with I/OAT enabled

Test bed

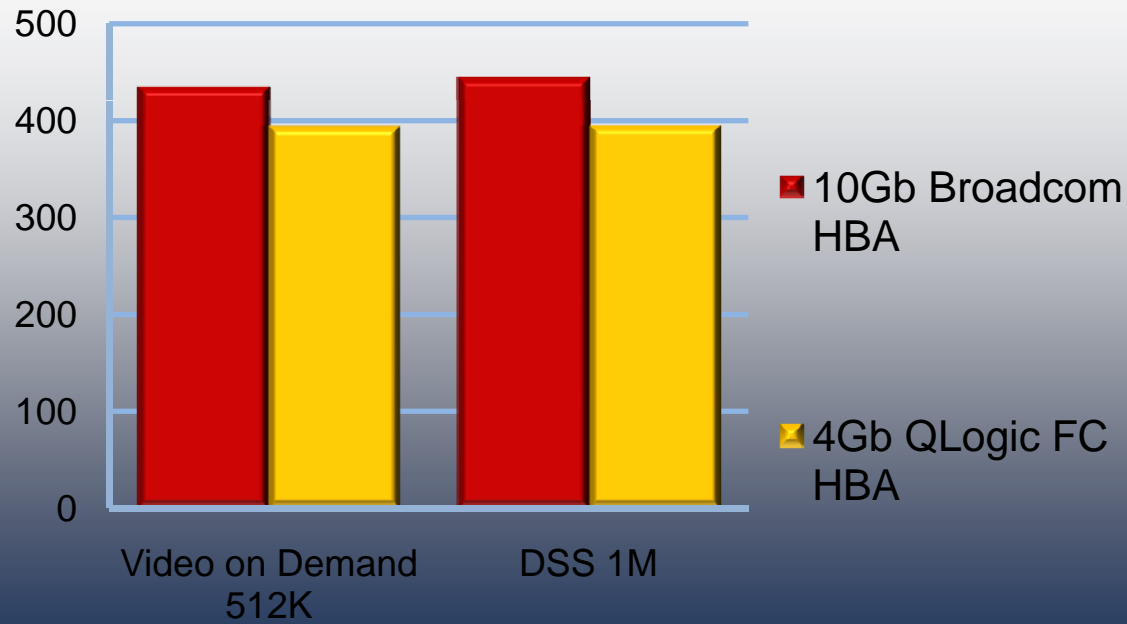

iSCSI initiator implementations

**10Gb Broadcom iSCSI HBA
(constrained to four 1Gb connections)
vs. 4Gb QLogic FC HBA**

10Gb Broadcom iSCSI HBA (constrained to four 1Gb connections) vs. 4Gb QLogic FC HBA

Large block tests: MB per second

In large block tests, the 10Gb Broadcom iSCSI HBA (constrained to 4Gb) and 4Gb QLogic FC HBA delivered comparable throughput.

10Gb Broadcom iSCSI HBA (constrained to four 1Gb connections) vs. 4Gb QLogic FC HBA

Large block tests: Percentage CPU utilization

In large block tests, the 10Gb Broadcom iSCSI HBA (constrained to 4Gb) and 4Gb QLogic FC HBA showed comparable CPU utilization.

10Gb Broadcom iSCSI HBA (constrained to four 1Gb connections) vs. 4Gb QLogic FC HBA

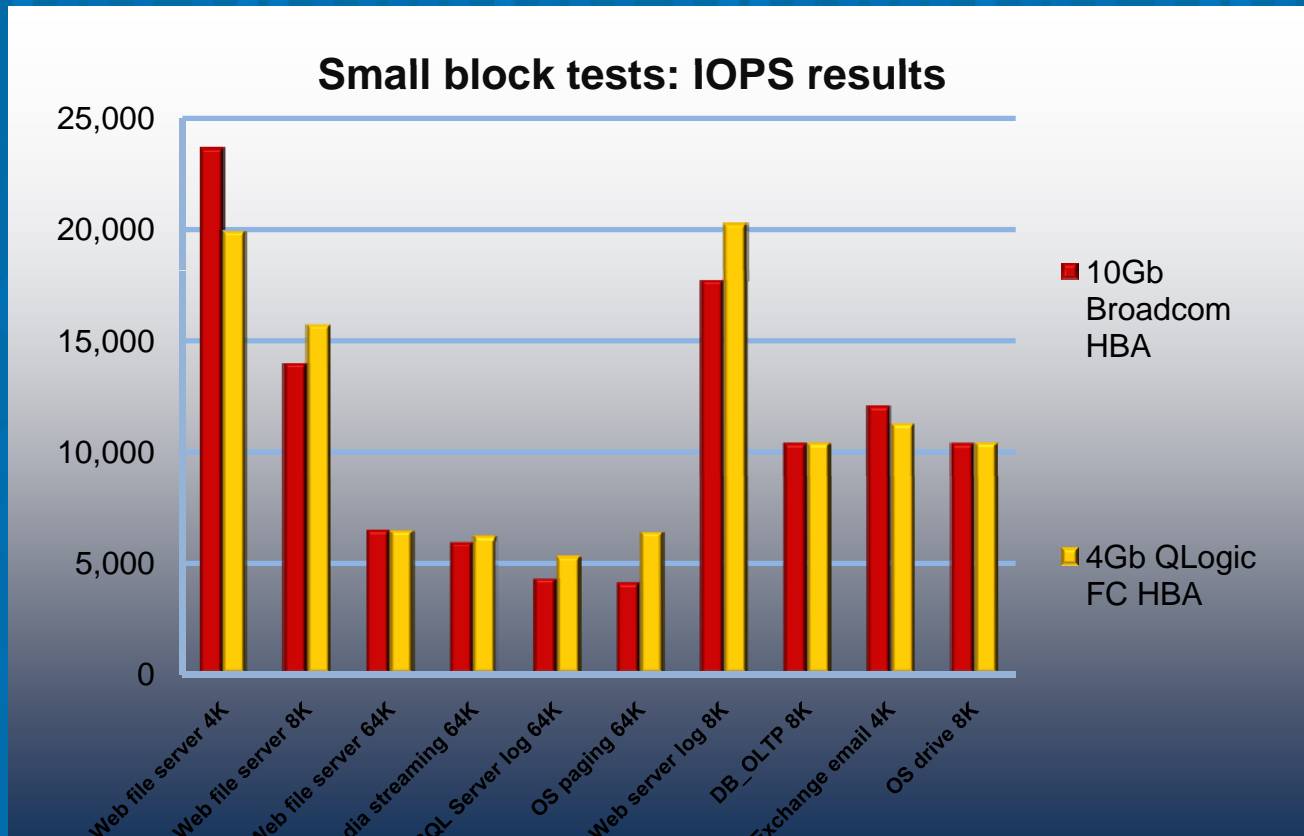

Large block tests: Detailed results

| MB per second (higher is better) | | |
|----------------------------------|-------------------------------------------------|-------------------|
| lometer test | 10Gb Broadcom iSCSI HBA (constrained to 4Gb) | 4Gb QLogic FC HBA |
| Video on Demand 512K | 433.69 | 392.78 |
| DSS 1M | 443.50 | 393.99 |
| Average MB per second | 438.59 | 393.38 |

| CPU utilization (lower is better) | | |
|-----------------------------------|-------------------------------------------------|-------------------|
| lometer test | 10Gb Broadcom iSCSI HBA (constrained to 4Gb) | 4Gb QLogic FC HBA |
| Video on Demand 512K | 1.49% | 1.46% |
| DSS 1M | 1.28% | 1.38% |
| Average CPU utilization | 1.39% | 1.42% |

Test results represent the median score of three test runs.

10Gb Broadcom iSCSI HBA (constrained to four 1Gb connections) vs. 4Gb QLogic FC HBA

In small block tests, the 10Gb Broadcom iSCSI HBA (constrained to 4Gb) and 4Gb QLogic FC HBA delivered comparable throughput.

10Gb Broadcom iSCSI HBA (constrained to four 1Gb connections) vs. 4Gb QLogic FC HBA

Small block tests: Percentage CPU utilization

In small block tests, the 10Gb Broadcom iSCSI HBA (constrained to 4Gb) and 4Gb QLogic FC HBA showed comparable CPU utilization.

10Gb Broadcom iSCSI HBA (constrained to four 1Gb connections) vs. 4Gb QLogic FC HBA

Detailed results: Small block tests

| 10Gb Broadcom iSCSI HBA | 4Gb QLogic FC HBA | EMC CX4: FC vs. iSCSI custom Iometer tests | 10Gb Broadcom iSCSI HBA | 4Gb QLogic FC HBA |
|-------------------------------|-------------------------|-------------------------------------------------------|-----------------------------------|-------------------------|
| Total IOPS | | Small block | Percentage CPU utilization | |
| 23,654.52 | 19,856.53 | Web file server 4K | 9.33% | 11.21% |
| 13,962.01 | 15,669.93 | Web file server 8K | 6.20% | 9.25% |
| 6,491.69 | 6,437.41 | Web file server 64K | 3.76% | 4.35% |
| 5,933.00 | 6,207.80 | Media streaming 64K | 3.51% | 5.39% |
| 4,300.32 | 5,287.31 | SQL Server log 64K | 2.33% | 4.20% |
| 4,112.61 | 6,388.26 | OS paging 64K | 2.39% | 5.51% |
| 17,687.67 | 20,196.73 | Web server log 8K | 8.88% | 11.19% |
| 10,349.84 | 10,335.63 | DB_OLTP 8K | 4.63% | 6.07% |
| 12,040.77 | 11,207.84 | Exchange email 4K | 5.42% | 6.53% |
| 10,347.27 | 10,350.13 | OS drive 8K | 4.79% | 5.83% |
| 10,887.97 | 11,193.76 | Small block average IOPS/processor utilization | 5.12% | 6.95% |

Test results represent the median score of three test runs.
